Summary

Backend engineer with 7 years building distributed systems in Python and Go. Led the migration of a monolith to event-driven microservices processing 40M events/day on Kafka. Strong PostgreSQL, Redis, and Kubernetes experience.

Experience

Lead Backend Engineer, Finlytics (2022-present): Designed a Kafka-based ledger pipeline (40M events/day, exactly-once semantics); cut p99 API latency from 480ms to 120ms; mentored 4 engineers. Backend Engineer, ShopStack (2019-2022): Built order-management APIs in FastAPI; introduced Celery task queues and idempotent retries; on-call owner for checkout services at 99.95 percent availability.

Skills

Python, Go, FastAPI, Kafka, PostgreSQL, Redis, Celery, Kubernetes, Terraform, AWS, distributed systems, observability (Prometheus, OpenTelemetry).

Education

B.Tech Computer Science, NIT Trichy, 2017.
